

Amendments to the Claims:

The listing of claims below will replace all prior versions and listings of claims in the application. The changes to currently amended claims are shown using strikethrough to identify deleted material and underlining to identify added material.

Listing of Claims:

1. (currently amended) A method for beneficiation of a mineral sulfide-containing material by air-injection froth flotation in the presence of a collector, the method comprising the steps of:
 - a) providing an aqueous slurry of the mineral sulfide-containing material;
 - b) adding a selective collector to the slurry in an amount less than about 100g/ton 100 g/ton of the mineral sulfide-containing material, the collector comprising at least one oil that contains no sulfur, nitrogen or phosphorous, wherein the oil is selected from the group consisting of:
 - 1) a natural oil or synthesized oil comprising:
 - A) triglycerides containing fatty acids of only 20 carbons or less, or
 - B) an ester made from a fatty acid and an alcohol; and
 - 2) an essential oil;
 - c) selectively floating the mineral sulfide by injecting air and selectively allowing the mineral sulfides to adhere to the air bubbles; and
 - d) recovering the mineral.

2. (currently amended) The method according to claim 1, wherein said mineral sulfide-containing material is selected from the group consisting of chalcocite, chalcopyrite, bornite, galena, sphalerite, pentlandite, molybdenite, and other sulfide minerals containing silver, gold, platinum, palladium, iridium, rhodium, and or osmium, either in the crystal structure or in association as an independent mineral species, and combinations thereof.

3. (original) The method according to claim 1, wherein said mineral sulfide-containing material is derived from ores, concentrates, precipitates, residues, tailings, slags, or wastes.

4. (currently amended) The method according to claim 1, wherein the essential oil comprises at least one of a terpene compound ~~or and~~ an aromatic compound.

5. (currently amended) The method according to claim 1, wherein the essential oil comprises a terpene derivative having a functional group selected from the group consisting of an alcohol, an ether, an aldehyde, or and a ketone.

6. (currently amended) The method according to claim 1, wherein said triglyceride further comprises at least one functional group selected from the group consisting of a ketoneketones, aldehydealdehydes, etherethers, or and alcohol functional group(s)alcohols.

7. (original) The method according to claim 1, wherein the natural oil or the synthesized oil further comprises an aromatic functional group.

8. (currently amended) The method according to claim 1, wherein said collector further comprises a sulfur-containing sulfide mineral flotation ~~promotorpromoter~~.

9. (currently amended) The method according to claim 8, wherein said oil and said sulfur-containing sulfide mineral flotation ~~promotorpromoter~~ are emulsified.

10. (currently amended) The method according to claim 8, wherein said sulfur-containing sulfide mineral flotation ~~promotorpromoter~~ is selected from the group consisting of xanthates, thionocarbamates, dithiophosphates, mercaptans, and combinations thereof.

11. (original) The method according to claim 8, wherein said collector further comprises a frother.

12. (original) The method according to claim 1, wherein said collector further comprises a frother.

13. (currently amended) The method according to claim 1, wherein said collector further comprises a petroleum-based flotation ~~promoter~~promoter.

14. (original) The method according to claim 1, wherein the natural oil is selected from the group consisting of cottonseed, corn, linseed, rice bran, safflower, soybean, avocado, jojoba, menhaden, lard, castor, cod liver, tung, oiticicia, apricot, sunflower, pistachio, herring, and coconut; and the essential oil is selected from the group consisting of limonene, citronella, eugenol, eucalyptus globus, camphor, and clove oil.

15. (original) The method according to claim 1, wherein said natural oil is selected from the group consisting of cottonseed, corn, linseed, rice bran, safflower, soybean, avocado, jojoba, menhaden, lard, castor, cod liver, tung, and oiticicia; said synthetic oil is 2-butyloctyl oleic acid ester; and said essential oil is selected from the group consisting of limonene, citronella, eugenol, eucalyptus globus, camphor, and clove oil.

16. (original) The method according to claim 1, wherein the collector comprises a natural oil selected from the group consisting of: cottonseed, corn, linseed, rice bran, safflower, soybean, avocado, jojoba, menhaden, lard, and castor.

17. (original) The method according to claim 1, wherein the collector comprises a natural oil selected from the group consisting of: cottonseed, corn, linseed, rice bran, safflower, and soybean.

18. (original) The method according to claim 1, wherein the collector comprises cottonseed oil.

19. (original) The method according to claim 1, wherein the collector comprises an essential oil.

20. (original) The method according to claim 19, wherein the collector comprises limonene or citronella.

21. (original) The method according to claim 1, wherein the collector comprises a synthesized oil.

22. (original) The method according to claim 21, wherein the collector comprises 2-butyloctyl oleic acid ester.

23. (original) The method according to claim 1, wherein the collector comprises a blend of two or more of said natural oils, synthetic oils or essential oils.

24. (currently amended) A method for beneficiation of a metallic species of gold, silver, copper, palladium, platinum, iridium, osmium, rhodium, ~~and or~~ ruthenium by air-injection froth flotation in the presence of a collector, the method comprising the steps of:

- a) providing an aqueous slurry of a material containing the metallic species, the material being derived from any ore, concentrate, residue, slag, or waste;
- b) adding a selective collector to the slurry in an amount less than about 100 g per ton of material containing metallic species, the collector comprising at least one oil ~~that contains no sulfur, nitrogen or phosphorous, wherein the oil is selected~~ from the group consisting of:

- 1) a natural oil or synthesized oil comprising:

- A) triglycerides containing fatty acids of only 20 carbons or less, or
- B) an ester made from a fatty acid and an alcohol; and
- 2) an essential oil;
- c) selectively floating the metallic species by injecting air and selectively allowing the mineral sulfides to adhere to the air bubbles; and
- d) recovering the metallic species.

25. (canceled)

26. (canceled)

27. (canceled)

28. (canceled)

29. (canceled)

30. (canceled)

31. (canceled)

32. (previously presented) The method of claim 1 wherein the collector is added in an amount less than about 50 g/ton of material.

33. (previously presented) The method of claim 1 wherein the collector is added in an amount less than about 30 g/ton of material.

34. (previously presented) The method of claim 1 wherein the collector is added in an amount less than about 10 g/ton of material.

35. (currently amended) The method of claim 1, further comprising separating the floated mineral sulfide and subjecting the mineral sulfide to a second ~~floatation~~ flotation by repeating steps (b) and (c).

SUPPORT FOR AMENDMENTS

The amendments to the specification and to claims 2, 4-6, 8-10, 13 and 35 were made to correct typographical errors and/or for stylistic reasons. Claims 25-31 have been canceled without prejudice to their continued prosecution in a continuation and/or divisional application. Claims 1 and 24 have been clarified and the amendments thereto are fully supported by the description in the specification (e.g., page 6, lines 25-27; etc.). No new matter has been added.

Upon entry of this Response, claims 1-24 and 32-35 are present and active in the application with claims 4-6 and 19-23 being presently withdrawn as directed to non-elected species.
